

Floating Lane Roller Base

Ref. E5259

Made from electropolished AISI-304L stainless steel, the Floating lane roller Base is a practical and professional solution for transporting floating lane rollers safely, making them easy to store. It has four spinning wheels, two of which have brakes.

One base can be used for various rollers, facilitating logistics and organisation in the pool area.

This equipment is supplied unassembled, but is quick and easy to assemble.

Advantages

High durability

Professional finish

Easy to transport

Professional finish
