Aquasplash Roll

Swim like a dolphin and overcome obstacles! With this aquatic roller, fun for the little ones in the pool is guaranteed. Made of Golfoam and covered with canvas, it has elastic bands on both sides, which allow it to be attached to floating lanes and rotate on its own. This roller enables swimming training with obstacles through various exercises: going over, going under, climbing, among others.

Inflatable Armbands – Children

Little strokes, big adventures. Designed to accompany little ones on their first adventures in the water, these armbands help children feel more confident during water activities. They are recommended for children aged 3 to 6 years, weighing 19 to 30 kg. Made from PVC and polyester, each armband has two independent air chambers for practical use. The inner polyester layer provides exceptional comfort for this type of product. With a colourful, playful design, they make every moment in the pool more enjoyable. Features: Made from PVC and polyester; Comply with EN 13138-1:2021; Age: 3–6 years; Weight: 19–30 kg; Two inflation valves per armband; Child-friendly design; Ideal for water activities and getting used to the water; Sold as a pair.

Aquasplash Slide

Slide into fun! The Aquasplash Slide has been developed to provide fun in aquatic environments. Manufactured from linear low-density polyethylene (LLDPE), it combines a robust, lightweight and impact-resistant structure, making it ideal for use in swimming pools and recreational areas. The material is UV-stabilised, ensuring greater resistance to sun exposure and improved colour stability. It complies with EN 1069-1, which specifies the general safety requirements, technical rules and test methods for the design of water slides installed in public swimming pools. It includes all the accessories required for assembly and fixing, manufactured from A4 stainless steel for enhanced durability and corrosion resistance. The slide can be dismantled and is supplied in two sections to facilitate transport. Features Manufactured from LLDPE polyethylene UV-stabilised Demountable and supplied disassembled Complies with EN 1069-1 Includes A4 stainless steel accessories

Medicinal Water Ball

Golfinho Sports medicinal water balls stand out for their unique design and quality, offering an alternative to traditional medicinal balls. Available in 5 different weights (1 to 5 kg), they are made of resistant, high-density PVC, ensuring durability and performance. Completely filled with water, these balls sink, making them ideal for specific exercises in water, but equally effective for training outside of water. Their rough surface provides good grip, facilitating handling and exercise performance. Suitable for functional training, rehabilitation, muscle strengthening and physical preparation, they adapt to different levels of physical condition and training objectives.

Aquabike Golfinho Professional

The Aquabike “Golfinho” is totally manufactured in stainless steel AISI-316L. The structure is very solid and the 4 paddle system is adjustable in 3 resistance levels, which allows the user to adapt it to his needs. It is easily adaptable to the height of any user, thanks to the adjustment of saddle and steering wheel (height and length). The height of the bicycle to the ground can also be adjusted according to the depth of the pool. The Aquabike Golfinho is designed to be used in swimming pools with depths between 110 and 145cm. For depths up to 165cm you can order a higher base, available as an accessory. Nylon wheels for easy transport. Total weight: 22 Kg.

Aquatic Boxing Gloves – Waterform

Intensify cardiovascular training in the water. The Aquatic Boxing Gloves - Waterform were developed to transform pool-based classes and training sessions into more dynamic, intense and effective workouts. Suitable for aquaboxing, aqua aerobics, personalised training and rehabilitation programmes, they combine cardiovascular work with muscle strengthening, while maintaining movement fluidity and the low joint impact characteristic of the aquatic environment. Their ergonomic design, inspired by traditional boxing gloves, allows boxing movements to be reproduced in the water comfortably and with control. The drainage holes allow water to pass through during movement, creating balanced resistance without restricting exercise execution. EVA foam on all four sides provides greater comfort, cushioning and hand protection during regular and intensive sessions. Features: Structure made from recyclable PP thermoplastic and EVA foam; Ergonomic design; Drainage holes for controlled water circulation; Lightweight, resistant and suitable for regular and intensive use. Aquatic Energy Kit – Waterform

A complete workout in the water. The Aquatic Energy Kit - Waterform was developed to provide a complete muscle-strengthening workout in an aquatic environment. Comprising a pair of dumbbells and an aquatic bar, it enables a wide variety of exercises for the arms, shoulders, chest and triceps, adapting easily to group classes, personalised training sessions, aquatic circuits and rehabilitation programmes. The dumbbells can be used individually, one in each hand, or mounted on the aquatic bar, increasing training options and allowing work at different intensity levels. Their three-dimensional fins create additional resistance in the water, while the circulation channels help control movement trajectory, promoting greater fluidity, precision and joint comfort. Suitable for aquafitness professionals, personal trainers, swimming pools, gyms, clubs, hotels and rehabilitation centres looking to diversify exercises and intensify muscle training in the water. Features Kit comprising a pair of dumbbells and an aquatic bar; HDPE thermoplastic structure and PVC thermoplastic handle; 100% recyclable material; Allows the...

Aquatic Power & Sculpt Shin Guards – Waterform

Maximum resistance in every movement. The Aquatic Power & Sculpt Shin Guards - Waterform were developed to intensify lower-limb muscle work in an aquatic environment. Suitable for pool-based classes and functional training sessions, they offer resistance in forward, backward and sideways movements, helping to work the legs, glutes, abdominals and body stability effectively, safely and with low joint impact. Their design with three-dimensional fins increases water resistance across different planes of movement, making each exercise more complete and controlled. Despite the intensity they provide, they are lightweight and comfortable, with EVA foam protection around the shin and calf, and an adjustment system with nylon straps and hook-and-loop fastening for greater safety and stability during training. They were developed for professional use, withstanding the demands of aqua aerobics, aquafitness and aquatic functional training classes. Features: Structure made from recyclable PP thermoplastic, EVA foam, nylon straps and...

Aquatic Power Dumbbells – Waterform

More intensity for training in the water. The Aquatic Power Dumbbells - Waterform are suitable for pool-based classes and functional training sessions. Designed to increase resistance during movements in the water, they allow users to work the arms, shoulders, chest, back and the entire upper body intensely, safely and with low joint impact. They feature three grooved sides that enable precise, controlled movements during training. Features: HDPE thermoplastic structure and PVC thermoplastic handle; 100% recyclable material; Lightweight, resistant and low-maintenance; Ideal for muscle training in an aquatic environment; Suitable for group classes, gyms, clubs, hotels and aquatic training centres. Aquatic Sculpt Dumbbells – Waterform

Transform training with the resistance of water. The Aquatic Sculpt Dumbbells - Waterform are aquatic dumbbells developed for pool-based classes and functional training sessions. Versatile and easy to use, they help diversify exercises, improve muscle toning and work different areas of the body smoothly, in a controlled way and with low joint impact. Thanks to their two different surfaces, they allow the resistance level to be adjusted according to the training goals and the users' fitness level. They can also be filled with water to reduce resistance, making them suitable both for lighter training sessions and for rehabilitation programmes. Ideal for suspension exercises, abdominal work, glutes, thighs, muscular endurance and targeted upper-body movements. Features: Structure made from recyclable HDPE thermoplastic and PVC cap; Resistant and low-maintenance material; Can be filled with water to reduce resistance; Two different surfaces for adjusting training intensity; Suitable for individual or group classes in the pool; Suitable for muscle toning, resistance, rehabilitation and aquatic functional training....

Parachute

The Aquatic Resistance Parachute is a piece of equipment designed for swimming training focused on developing strength, power and muscular endurance. Used in the water, it creates additional resistance as the swimmer moves through the water, making the training session more challenging and effective. It is available in different resistance levels, allowing the intensity to be adapted to the training objective, the athlete’s level and the type of exercise. It is ideal for clubs, swimming schools, competitive teams and swimmers looking to improve their performance through specific resistance exercises.

Made of electropolished stainless steel AISI-316L. Ideal to become starting blocks (400mm) removable. REF: E584

Backstroke Start Device

The Backstroke Start Device has been designed to improve power, stability and efficiency during the backstroke start. Featuring a universal system, compatible with all standard starting blocks, it allows swimmers to optimise their position on the wall and achieve a stronger, more consistent start. The non-slip surface ensures maximum safety and confidence at the moment of push-off, while the 5-position adjustment system easily adapts to different athletes and starting blocks. Simple and quick to install, it is suitable for both training and competition and can be easily removed after use. Developed in accordance with WORLD AQUATICS standards (Part Two – Rule 15.10). Key benefits: More powerful and efficient start; Non-slip surface; Adjustable for different users; Easy assembly and removal. Competition Support not included.

Platform for Starting Blocks

Platform with height of 300mm above water level. The upper part of the vessel, whose depth can be 1 meter or 70 cm, is covered by a special plastic grid (ABS), joined inside by AISI-316L stainless steel pipes. This grid is mounted continuously and connected to each other and placed and housed on a stainless steel frame that covers the whole width and depth of the platform. The frame is assembled and seized by welding points to form modules of the same width as the swimming pool lanes (2m or 2.5m), which are attached through a fixed support on the floor of the pool dock. This avoids any movement of the parts, guaranteeing a greater rigidity and resistance in the whole platform that is fixed to the pier in one piece. In order to ensure the safety of users, all parts are non-slip and the platform is coated around its perimeter with polished stainless steel tube and rounded angles. The frame includes the built-in anchors for the placement of starting blocks, which are fixed with special screws which, in the absence of the starting block, have the function of hiding the anchor itself. Inside the platform and...

Movable Floor to reduce pool depth

Made up of removable and interconnected modules, made of AISI-316L stainless steel and special ABS plastic grid. Feet with levelers and kneecap, to adapt to the slope of the pool. It has as option, a 90cm high balcony and a lower protection grid to seal the passage under the platform. All made of stainless steel AISI-316L, with electropolished treatment. The platform modules are assembled and joined together by snapping until they reach the desired size and adapt to any pool regardless of the bottom slope. It can be mounted inside water, thus avoiding the emptying of the pool.

Ocean Reclining Sun Lounger

Relax and make the most of every moment. Whether by the pool, on the beach or in the garden, any break becomes more comfortable with the Ocean Folding Sun Lounger. With a modern and elegant design, it fits easily into any outdoor space, offering a relaxing experience worthy of a resort. Made from aluminium and polypropylene, it combines lightness with sturdiness, ensuring stability and durability even with heavy use. Its high-density textilene fabric is breathable, quick-drying and resistant to water and UV rays, maintaining comfort even on the hottest days. The adjustable backrest offers five reclining positions – from sitting upright to fully reclined. It also features two concealed wheels and non-slip feet. Designed for outdoor use, it is easy to assemble, transport, store/stack and clean, requiring little day-to-day maintenance. The blue fabric is replaceable, ensuring the product's longevity.

WP3000 Mini Water Polo Ball – Size 3

Learn, control and play with confidence. The WP3000 Mini Water Polo Ball - Size 3 by Golfinho Sports was developed for beginners in water polo, offering easier handling, control and safety in the water. As a size 3 ball, it is suitable for mini water polo and youth development categories, making it ideal for young athletes in the learning stage and in their sporting development. The Aquagrip technology provides a surface with enhanced grip, even in constant contact with water, helping players catch, pass and shoot with greater stability. This feature makes the ball easier to control and promotes a more confident and enjoyable playing experience. Lightweight, resistant and designed for regular use in the pool, the WP3000 is an excellent choice for clubs, swimming schools, youth teams and introductory water polo programmes. Features: Size 3 - suitable for mini water polo and youth development categories; Ideal for beginners in water polo; Aquagrip technology for enhanced grip and control in the water; Made of rubber.

REFERENCE	OPTION

WP4000 Water Polo Ball – Size 4

Better control. Play with more confidence. The WP4000 Water Polo Ball - Size 4 by Golfinho Sports was created to offer a safer, more comfortable and more controlled playing experience in the water. Suitable for women's water polo and youth categories, it complies with World Aquatics standards for the sport. The Aquagrip technology provides the ball with a surface that offers enhanced grip, even in wet conditions, helping players hold, pass and shoot with greater stability. This construction supports ball control during fast movements and contributes to a more precise response throughout the game. With a robust structure designed for frequent use in the pool, the WP4000 is an excellent choice for clubs, schools, teams and athletes looking for a reliable ball for training sessions and matches. Features: Size 4 - suitable for women's water polo and youth categories; Complies with World Aquatics standards; Aquagrip technology for enhanced grip and control in the water; Made of rubber.

WP5000 Water Polo Ball – Size 5

More control, more confidence, more game. The WP5000 Water Polo Ball - Size 5 by Golfinho Sports was developed for players looking for control, safety and performance in the water. As a size 5 ball, it is suitable for the men's category and complies with World Aquatics standards for water polo. Thanks to this technology, the surface of the ball makes it easier to grip, even when in constant contact with water, increasing stability during passes, catches and shots. The result is a ball that is easier to control, with better response in fast actions and greater confidence in every play. Robust and designed for regular use in the pool, the WP5000 is ideal for clubs, schools, teams and athletes looking for a reliable ball for training sessions and matches. Features: Size 5 - suitable for men's water polo; Complies with World Aquatics standards; Aquagrip technology for easier grip in the water; Made of rubber.

Beach Access Walkway

Accessibility for All With the Golfinho Rescue Beach Access Walkway, any sandy access point can be transformed into a simple, safe and inclusive pathway. Designed to remove barriers and bring everyone closer to the sea, this equipment creates stable and accessible routes, particularly for people with reduced mobility. Designed for demanding environments - maritime and beyond - it combines strength, flexibility and adaptability to the terrain, while requiring minimal maintenance. Its modular roll-out structure makes on-site installation easy and allows the route to be adjusted according to specific needs. More than a functional solution, it is a commitment to inclusion - ideal for beaches, hotels and organisations that value universal access and a positive experience for all users. Technical Specifications: Tensile strength > 100 kN/m, allowing vehicles to cross; Weight < 2 kg/m^2; Operating temperature between -40°C a...

Nature Portable Training Clock – 4 Hands

This training clock is made from fully recyclable material (high-impact polystyrene – HIPS). 50% of its composition comes from recycled material, making it an eco-friendly product. It features four aluminium hands in different colours arranged in a cross pattern. Its base is made of PVC. As well as being portable, another major advantage of this device is that it can be used in areas with high humidity and/or dust, as it is certified to IP 46 protection rating. Fully sealed, it can even withstand powerful water jets. These features make this the ideal training clock for swimming pool facilities. Made from unbreakable materials with UV protection, it offers high robustness, stability and lightness. It has a rear button to switch it on and off and is powered by a battery (LR 6 AA), which is supplied with the unit. It can be customised according to the options in the table below.

Carbon Fibre Rescue Stick with Rope

Telescopic rescue stick made of carbon and made up of 4 sections, allowing an extension of up to 5m in length. It has a lever lock on each section and a nylon ferrule with a screw system that allows the aluminium lifeguard hook (MS045P.M) to be attached. Includes lifesaving hook and bag with polypropylene rope. Carbon fibre The rod is made from high quality carbon fibre, giving it high rigidity but also lightness for easier handling. Polypropylene rope This rescue equipment includes a 15m polypropylene rope with bag (MS091), which offers greater safety when rescuing the victim. Dimensions Length (without hook): 1.46m to 5m Weight: 1.50kg REF: MS097

Dolphin 3 Plus

The lifeguard's new great ally The Dolphin 3 Plus is an advanced electronic water rescue solution designed to respond quickly, accurately and safely in any aquatic environment. Operated by remote control with a monitor, it reaches an impressive speed of 7 m/s (24 km/h) - about three times faster than an Olympic swimmer - allowing for almost immediate intervention in emergency situations. Its towing capacity of up to 1 tonne and high buoyancy, equivalent to two conventional buoys, make it extremely effective in rescuing one or more victims. Equipped with GNSS technology, remote monitoring and an automatic return system to the starting point (in case of signal loss or low battery), the Dolphin 3 Plus combines intelligence and robustness with a high level of safety. The watertight and independent battery compartment ensures continuous operation even in the event of damage to the hull, while the propeller protection ensures total safety for victims in panic. It can be controlled via remote control or locally using accelerator buttons. Technical Specifications Dimensions: 100 cm (L) x 70 cm (W) x 25 cm (H) Weight: 16.75 kg Maximum speed: 7 m/s (24 km/h) Autonomy: up to 70 minutes (at half power) Towing capacity: up to 1,000 kg Remote control...

Lifebuoy

Circular lifebuoy made from expanded polystyrene (EPS): Due to its cellular structure, polystyrene has an excellent buoyancy capacity, making it ideal for rescue equipment such as this buoy. Durable: This material is impact-resistant, guaranteeing a long service life for the buoy. Recyclable: Polystyrene can be recycled, which contributes to environmental sustainability. Rescue rope not included (MS013). Fabric Characteristics White technical fabric with small red stripes. Composed of polyester with UV resistance. It has a weight of 200 g/m^2. Item only commercialized outside Portugal. In Portugal commercialized by Golfinho Rescue.

Rescue Belt PRO

With an improved design, this belt allows for better execution of rescue techniques. The polyethylene foam with which it is made has EVA in its composition, giving it greater flexibility and comfort during use. As a result, this product is highly buoyant and more durable. Its robustness and four side handles make it more versatile and safer to use. Item only commercialized outside Portugal. In Portugal commercialized by Golfinho Rescue.

REFERENCE	OPTION
MS066	Yellow · 100x15x8cm

Rescue Board

The rescue board fulfils all the necessary requirements for effective water rescues. Yellow in colour, it is made from resistant material, with a non-slip panel at the top and its entire perimeter protected by anti-shock material. Its upper part has EVA (20 mm) in its composition, making it very resistant and difficult to break. The board is coated with high-quality fibreglass and epoxy resin. It has eight soft-touch handles - 6 on the sides (three on each side), one on the top and one on the bottom. It has a built-in keel (MS060.1) attachment at the stern end and a clip-on pavilion. Item only commercialized outside Portugal. In Portugal commercialized by Golfinho Rescue.

Water Rescue Throw Bag

Designed for rescue situations in aquatic environments, this rescue bag with rope is an essential equipment for lifeguards and emergency teams. Highly resistant and buoyant, and equipped with a 15 metre polypropylene rope, it is ideal for rescuing victims in rivers, lakes and other aquatic environments. The bag also has a fastening buckle, which makes it easy to transport and ensures that the equipment is always accessible in emergency situations. Simple and effective operation: the bag is thrown by the rescuer towards the victim, who can hold on to the bag or the rope to be pulled to safety. REF: MS091 OUT OF STOCK

“Golfinho“ Ring Buoy

Round Buoy made of soft material (polystyrene) and lined with fabric (nylon). Special for pools. Item only commercialized outside Portugal.

Child Head Immobilizer

This item, CE approved, has been specially developed for use in rescuing children and young people. Made of foam and coated with polyethylene, this immobiliser is highly resistant and impermeable to liquids and body fluids (preventing the appearance of bacteria). It is designed to be applied on a rigid plane with a cervical collar, to fix the head and neck in the correct position. The firm cushioning underneath and on the sides of the patient's head is complemented by elasticated straps placed on the forehead and/or on the front of the cervical collar. Contains two ear-cut head blocks, a universal base plate and two durable head straps. It includes a head strap adaptable to the patient's forehead and two large ear holes for monitoring the patient's haemorrhage (outer diameter of the hole: 4,5 cm). Can be used for X-rays, MRI or CT scans. Item only commercialized outside Portugal. In Portugal commercialized by Golfinho Rescue.

Resuscitation Mask with box (CPR)

With tube to assist breathing. Approved according to the CE mark.REF: MS034

Water Rescue Training Manikin

This manikin, made of 16oz abrasion-resistant canvas, is designed to provide a realistic water rescue experience for lifeguards in training, as it accurately simulates the feel of an “unconscious” person. With a unique design, this manikin has a spine and shoulders, giving it a good structure between the torso and arms, which allows for a simulation that is more closely aligned with the human body. The Rescue Manikin measures 1.60m and weighs 30kg when dry. Its fabric allows it to dry quickly when removed from the water.

Base for Ring Buoy Support

Made of 43mm round stainless steel pipe AISI-316L. Ring Buoy Support is not included. Height: 150cm REF: MS010

Charging Stand – Dolphin 3 Plus

A stable and secure base with regulated power supply (25.2 VDC up to 8 A), allowing reliable charging or powering of the equipment. With a solid and stable design, this station not only enables safe charging of the equipment but also keeps it stored and ready for use at any time. Its regulated power supply ensures consistent energy delivery, contributing to efficient charging and extending the device's lifespan. Key advantages: Stable and durable base to support the equipment; Safe charging with regulated power output; Designed for professional and intensive use; Keeps the Dolphin 3 Plus always ready for deployment. It is a practical and efficient solution for charging and storing the Dolphin 3 Plus, and a perfect complement to maximize the equipment's performance and operational readiness. REF: MS098.1

ColorADD Programme Flag

Official flag of the ColorADD Programme. It allows you to signal that the beach in question uses the ColorADD code. The use of this flag presupposes the incorporation of ColorADD symbols in a beach environment, with the respective licence for use. Find out more about this project HERE. Made of high-strength perforated polyester, this flag is ideal for prolonged outdoor use, even in adverse conditions. The perforated fabric allows wind to pass through and prevents tearing, making it perfect for any coastal area. Made from a single piece of fabric (no seams), it minimises the risk of wear and tear, significantly increasing durability and wind resistance. The fabric also has UV protection, offering greater colour durability.

Lid for Lifebuoy Cabinet

Manufactured in Polyethylene with UV Protection.
REF: MS065.2

Life Buoy Support (up to 60cm)

Made of stainless steel AISI-316L. Can be assembled on the wall or on the base for Ring Buoy support (MS010). Includes stainless steel screws and rawl plugs. Suitable for buoys up to 60 cm in diameter. REF: MS042

Lifebuoy Cabinet

Manufactured in Polyethylene with UV Protection, dimensions: 830mm diameter and 220mm depth. Buoy not included. REF: MS065.1

Lifeguard Pool Station – Stainless steel

The structure is made entirely from electropolished AISI-316 stainless steel, ensuring a shiny appearance and protecting the stainless steel from corrosion, which gives it incomparably better durability than iron and prevents the appearance of rust, both on the structure and on the floor. Stable and robust structure, with a 70cm (diam.) round base, 4mm thick and 43mm round tube props. Base with two nylon wheels for easy transportation. Equipped with hooks for attaching a Rigid Plane, Circular Buoy, Rescue Rod and Flexible Belt. Includes acrylic panel for attaching the pool sign. Notice not included. Supplied disassembled. Cleaning instructions: Whenever limescale or stains are found, they should be cleaned with “Golfinho” stainless steel cleaner, without rubbing with abrasive elements. Then rinse thoroughly with fresh water and leave to dry. Item only commercialized outside Portugal. In Portugal commercialized by Golfinho Rescue.

Perforated Sign Flag – ColorADD

These flags follow the ColorADD symbolism, which aims to facilitate the interpretation of beach signage by people with colour blindness. With these flags, beaches become a more inclusive and accessible place for these people. Find out more about this project HERE. Made of high-strength perforated polyester, these flags are ideal for prolonged outdoor use, even in adverse conditions. The perforated fabric allows wind to pass through and prevents tearing, making them perfect for any coastal area. Made from a single piece of fabric (no seams), the risk of wear and tear is minimised, significantly increasing durability and wind resistance. The fabric also has UV protection, offering greater colour durability.
